Texture Bends

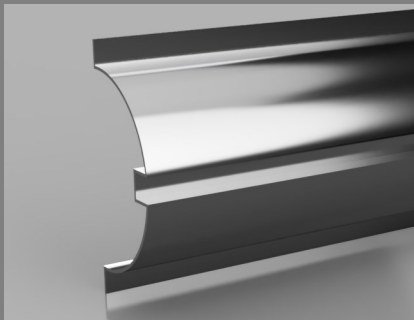

Texture Bends

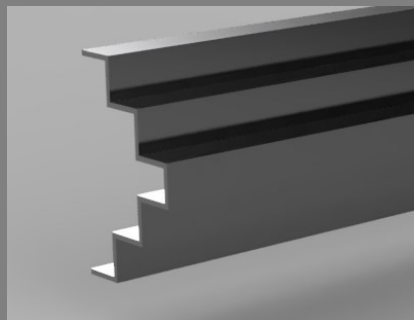

The I-Beam

Suitable for indoor or outdoor use, the I-Beam system provides the look of steel beams, with the ease-of-installation of an interlocking panel system, the versatility of aluminum, steel, or custom finishes, and a lower price point and weight than solid steel, while still providing the industrial feel of steel beams.

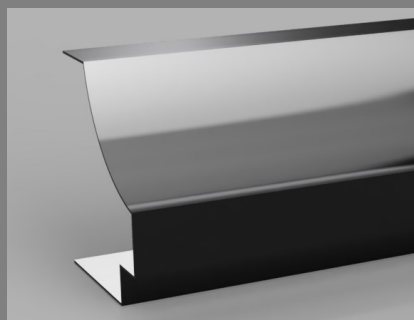

The Sphere

Sleek and modern, the Sphere adds the perfect polished finish. With its rounded edges and accent moat, the Sphere adds a fashionable and contemporary finish that will complement any modern styles and complete the final look of your building.

The Bullnose

Intricate and detailed, despite its name, the Bullnose adds a delicate finish to any seam or joint, indoor or outdoor. Pondering its formation, the Bullnose will leave onlookers in awe of such diaphanous elegance.

The Ogee

Classic and sophisticated, The Ogee brings a quaint, antiquated feel to outer slab edges. Available in diverse finishes; choose classic with a stone finish, or modernize your building with a brushed metal finish. The lightness and ease of installation of the Ogee slab edge cover save the expense, time, and back-breaking labor of traditional stone ledges.

Texture Bends

Finishes
